Editorial

The Medical Journal of the Islamic Republic of Iran (often abbreviated MJIRI) stands as one of the longstanding peer-reviewed scientific journals in the Iranian medical publishing landscape. Established in 1987, the journal has served for nearly four decades as a platform for disseminating original research, review articles, and scholarly discourse across a wide range of medical and clinical sciences.

Throughout its history, the journal has maintained a commitment to open access and international visibility, enabling researchers inside Iran and abroad to access its contents without subscription barriers. This openness aligns with global trends in scientific publishing and enhances the journal's role in shaping medical knowledge.

Over 39 years, the journal has published a broad spectrum of articles that contribute to both basic and clinical medicine. Its articles often address public health challenges, epidemiology, clinical practices, and emerging scientific questions. By facilitating peer-reviewed dissemination of research, the journal supports evidence-based practice and policy decisions in healthcare.

Editorial leadership over the decades has played a vital role in upholding rigorous scientific standards and editorial integrity. Importantly, the journal's long history reflects broader developments in Iranian health research infrastructure, including the growth of medical universities, research institutes, and professional networks. As a result, anniversaries such as the 39th provide an occasion not only to celebrate longevity but also to reflect on evolving priorities in medical research and publishing.

Marking its 39th anniversary, the Medical Journal of the I.R of Iran exemplifies sustained scholarly contribution in medical sciences. From its early years as a quarterly journal to its current continuous publication model, it continues to support the communication of important research findings. This milestone invites recognition of past achievements and anticipation of future advancements in Iranian and international medical scholarship.
